Psychologists offer an increasing variety of services to the public. Among these services, psychological assessment of personality and behavior continues to be a central activity. One main reason is that other mental health professionals often do not possess a high level of

competence in this area. And when dealing with children and adolescents, psychological assessment seems to take on an even greater role.

Therefore, it follows that comprehensive graduate-level instruction in assessment should be a high priority for educators of

psychologists who will work with these youth. This textbook is organized into three sections, consistent with the authors' approach to teaching. Part I provides students with the psychological knowledge base necessary for modern assessment practice, including historical

perspectives, measurement science, child psychopathology, ethical, legal, and cultural issues, and the basics of beginning the assessment process. Part II gives students a broad review of the specific assessment methods used by psychologists, accompanied by specific advice regarding the usage

and strengths and weaknesses of each method. In Part III, we help students perform some of the most sophisticated of assessment practices: integrating and communicating assessment results and infusing assessment practice with knowledge of child development and

psychopathology to assess some of the most common types of behavioral and emotional disorders in youth. A text focusing on assessment practices must be updated every four to six years to keep pace with advances in test development. For example, several of the major tests reviewed in

the text, such as the Behavioral Assessment System for Children and the Child Behavior Checklist, have undergone major revisions since the publication of the last edition making the current content outdated. Further, another major test, the Conners<sup>®</sup> Rating Scales, is undergoing

substantial revisions that should be completed before publication of the next edition. Finally, the evidence for the validity of the tests and the recommendations for their appropriate use evolve as research accumulates and requires frequent updating to remain current. For example, there

was a special issue of the Journal of Clinical Child and Adolescent Psychology published focusing on evidenced-based assessment of the major forms of childhood psychopathology that will need to be integrated into the chapters in Part 3. This latter point reflects an important

trend in the field that should influence the marketing of the book. That is, there are several initiatives being started in all of the major areas of applied psychology (e.g., school, clinical, and counseling) to promote evidenced-based assessment practices. These initiatives have all

emphasized the need to enhance the training of graduate students in this approach to assessment. This has been the orientation of this textbook from its first edition: that is, *Clinical Assessment of Child and Adolescent Personality and Behavior* has focused on using research to guide all

recommendations for practice. The ability of the textbook to meet this training need should be an important focus of marketing the book to training programs across all areas of applied psychology.

Physiological and psychological trauma is explored across three broad areas: 1) child maltreatment and family violence; 2) acute and post-traumatic stress, including that which is associated with military service, war,

Clinical neuropsychology has become a field of major prominence during the past several years, as well as a field of great complexity. As a result of the extensive amount of activity that

neuropsychology has experienced recently, two major developments have emerged. First, several approaches have evolved regarding comprehensive neuro psychological assessment. There are presently several standard test bat teries in common use, as well as an approach

to assessment that does not make use of standard batteries, but rather fits the evaluation accomplished to the particular diagnostic problems presented by the individual patient. Second, a great deal of specialization has emerged, with assessment procedures developed for evaluation

of specific types of neuropsychological deficit. The purpose of this volume is to review these developments, particularly with reference to their implications for application in clinical settings. The history of this book's development is of particular interest. Some years ago, the Veterans

Administration became concerned with developing an optimal method of neuropsychological assessment for its many health-care related facilities. Initially, the problem was conceptualized in terms of whether the VA should encourage wider use of the long-established Halstead-Reitan

Neuropsychological Test Battery (HRB) or promote more extensive use of the recently developed Luria Nebraska Neuropsychological Test Battery (LNNB). A conference was funded to bring together authorities in clinical neuropsychology to discuss this matter and present a series of

We identify frictions in the market for liquidity as well as bank-specific and market-wide factors that affect the prices that banks pay for liquidity, captured here by borrowing rates in

short or long liquidity. We find that the price a bank pays for liquidity depends on the liquidity positions of other banks, as well as its own. There is evidence that liquidity squeezes occasionally occur and short banks pay more the larger is the potential for a squeeze. The price paid for liquidity

is decreasing in bank size and small banks are more adversely affected by an increased potential for a squeeze. Healthier banks pay less, but contrary to what one might expect, banks in formal liquidity networks do not.

Interracial Housing was first published

segregation. In the press, in local, state, and federal government agencies, in fact, wherever people thrash out the problems of democratic living, the question is being discussed. This book offers facts which throw new light on an important issue in the overall problem of racial segregation.

Here are the results of a study comparing two kinds of public housing—segregated and non-segregated. Two low-rent, public housing projects in which Negroes and whites live as next door neighbors were compared with two similar housing developments in which

Negroes and whites are assigned to separate buildings or areas. The study reveals how the people living in these contrasting ways differ in their social relations, community morale, racial attitudes, and other significant social aspects. The research procedures used are explained, and general

conclusions about changing prejudices are offered. Social scientists, psychologists, housing officials, and community leaders concerned with the problems not only of housing but of race relations in general will find helpful guidance here. In addition to providing much-needed data on an
