Synopsys Timing Constraints And Optimization User Guide

Eventually, you will agreed discover a additional experience and execution by spending more cash. nevertheless when? reach you tolerate that you require to get those all needs later having significantly cash? Why don't you try to get something basic in the beginning? That's something that will guide you to understand even more more or less the globe, experience, some places, later than history, amusement, and a lot more?

It is your totally own time to perform reviewing habit. along with guides you could enjoy now is synopsys timing constraints and optimization user guide below.

Synopsys . Why Constraint Analysis? Timing constraints are a crucial specification in the modern integrated circuit (IC) design flow. them at almost every step of the design process. The rapid increase in design size and complexity, as well as the widespread reuse of intellectual property (IP) design

The Galaxy Constraint Analyzer is an intuitive tool that enables designers to quickly assess the correctness and consistency of timing constraints. Correctness and consistency lead to more efficient runtimes in Synopsys' Design Compiler® synthesis and IC Compiler physical implementation tools.

Synopsys Design Compiler to elaborate RTL, set optimization constraints, synthesize to gates, and prepare various area and timing reports. You will also learn how to read the various DC text reports and how to use the graphical Synopsys Design Vision tool to visualize the synthesized design.

RTL-to-Gates Synthesis using Synopsys Design Compiler

Static timing analysis checks the timing across all paths in the design (regardless of whether these paths can actually be used in practice) and finds the longest path. For more information about static timing analysis, consult Chapter 1 of the Synopsys Timing Constraints and Optimization User Guide.

Right now, I'm using Synopsys to determine the minimum area necessary to represent some circuits (using the Nangate 45nm library). I'm not doing P&R right now; I'm just trying to determine transistor area. My only optimization constraint is to minimize area. I've noticed that if I tell DC to compile more than one time in a row, it produces ...

To set optimization goals on a particular level of hierarchy, follow these steps: Select the pre-optimized chip icon in the Chips window, press Button 2 and choose Edit Constraints to display the constraints tables. Select the Modules tab. Find the row that displays the level of hierarchy for which you want to set an optimization goal.

Timing budgeting distributes positive and negative slack between blocks and then generates timing constraints in the Synopsys Design Constraints (SDC) format for block-level implementation. To generate a pre-budgeting timing analysis report file, use the `check_fp_timing_environment` command. To run the timing budgeter, use the `allocate_fp_budgets` command. Immediately after budgeting a design, you can use the `check_fp_budget_result` command to perform post-budget analysis. [16]
